

**Overall Winner**  
2008 Best Large Home Theatre

### Digital Telephone Systems

A PAC Digital Telephone System can not only put you in touch with just about any corner of the world, it can also connect you to something a little closer to home, like simply a room at the other end of the house. One-touch buttons make room-to-room communications a snap - without wall intercoms. Caller ID, programmable ringers, music on hold...almost every feature imaginable, the PAC Digital Telephone System is the solution to your home's telecommunication needs.

### Lighting Control

In addition to setting the perfect mood, a PAC Lighting Control System can also make your home safer, more convenient and more efficient. For example, an "Entertain" button on a PAC Lighting Control System can automatically adjust all exterior and interior lights, even set your music system to a desired level and open selected window coverings. At the end of the evening, a simple button press ensures that all lights in the home are adjusted to the levels you desire. Simply. Elegant.

### Distributed Audio/Video

Whatever your tastes, music is an everyday part of life. A PAC A/V System can fill each room of your home with music from your CDs, MP3s or even streaming audio via the Internet. Audiophile quality in-ceiling loudspeakers and intuitive controls can provide music in as many or as few rooms as you like. A PAC A/V System can also distribute video from any source such as a DVD Player, VCR or Satellite Receiver to all the televisions in the home. Handheld remotes can control the video source from any room.

### Home Theatre & Media Rooms

Whatever it is that you envision in a home theater, PAC can make that a reality. Our design and engineering department will generate detailed customized seating arrangement layouts & acoustical treatment specifications to ensure that you will receive the best performance possible. From dedicated media rooms to family rooms, we design systems for every level of performance and budget.

### Security & Access Control

A PAC Security System provides the right amount of protection for your needs, including electronic access control, gate interface systems, video surveillance cameras and alarm system monitoring services. With the touch of a single button you can open the gate, activate the pathway lights and unlock the front door. With a PAC Security System your home and loved ones are protected.

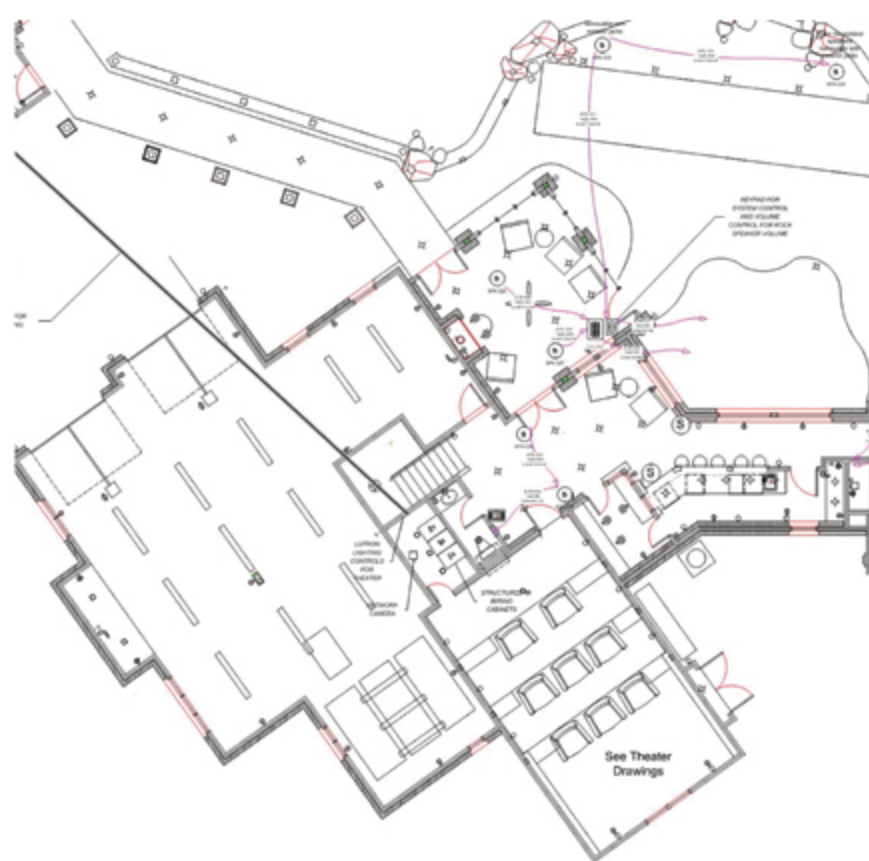

### Home computer Networking

PAC can connect and configure your home network(s). Wired or wireless, each computer can be accessed from anywhere on the property. We will configure your network sharing capabilities and resources such as high-speed Internet connection, printers and faxes to your specification.

### Home Systems Integration

Home Systems Integration is essentially the process of linking the home's various subsystems - Lighting, Security, Air conditioning, Entertainment and Telecommunications - together to allow them to communicate with one another. Imagine a convenient, intuitive touch panel from which you can quickly and easily control the lights, air conditioning, security and music. Now imagine being able to access those controls from anywhere in the home, or anywhere in the world via an Internet browser. That's just a small part of what PAC Home Systems Integration is about.

Pacific Audio and Communications is a leader in the Electronic Systems Integration Industry. We specialize in the design, integration and installation of electronic systems in residential environments. Since 1991, we've completed over a thousand quality installations in Hawaii & California. Recently, our installations have received national attention in several consumer and trade publications. We work with builders, architects, interior designers, and related professionals to combine grace and elegance with high-tech wizardry, providing a complete solution (design, installation, and technical support services) from project conception to completion.

### PAC e-Design

In addition, we offer PAC e-Design for the discriminating homeowner, architect, designer, or builder committed to obtaining the most comprehensive residential electronic systems design services available. In this age of rapid advancements in technology, you need a resource to rely on to help you to determine your home's technology needs. PAC e-Design fulfills this need. This highly specialized service enables you to move beyond pre-configured systems into the realm of truly custom residential electronic systems. PAC e-Design provides a comprehensive, detailed electronic systems design that will simply and elegantly enhance your home and lifestyle.
